My Survey

document simplicity survey

In this survey, you will be provided with one reference sentence, along with several sentences to compare. You need to evaluate the semantic, syntactic and simplicity level of each sentence compared to the reference sentence. The details are as follows:

- Semantic: The sentence retains all semantics of the reference sentence.
- Grammar: The sentence is grammatically correct.
- Simplicity: The sentence is easier to understand than the reference sentence.

You will evaluate each option on a scale from 1 to 5 from strongly disagree to strongly agree. There are 10 groups of sentences you need to evaluate. Thank you for participating in this survey.

Below we provide some examples with a indicating score just for your reference, please have a look before continue the survey:

Reference Sentence: On the left side, you'll find the file as it is stored on disk and the right side will contain your recovered version of file (using the found swap file).

Strongly Disagree Disagree Neutral Agree Strongly Agree

Semantics Preserving

Reference Sentence: On the left side, you'll find the file as it is stored on disk and the right side will contain your recovered version of file (using the found swap file).

On the right side, you'll find the recovered version of the file (using the found swap file), and the file as it is stored on disk will be found on the left side.

On the left side, you'll find the recovered version of the file and on the right side will contain the file as it is stored on disk.

Grammar Correctness

Reference Sentence: On the left side, you'll find the file as it is stored on disk and the right side will contain your recovered version of file (using the found swap file).

On the left side, you'll find the file as it is stored on disk and the right side will contain your recovered version of the file (using the found swap file).

Under the left side, you will find the files as it is stored on disks and the right side will contain your recovered versions of the file (using the

Simplicity compared to Reference

Reference Sentence: On the left side, you'll find the file as it is stored on disk and the right side will contain your recovered version of file (using the found swap file).

On the right side, you'll see the difference from the recovered swap file.

On the left side, you'll find the file as

it is stored on disk and the right side will contain your recovered version of file (using the found swap file).

Situated towards the left-hand quadrant, you will discover a representation of the aforementioned digital document precisely as it maintains its existence within the confines of the computer's physical storage medium. Correspondingly, within the diametrically opposite right-hand division, one shall encounter the regenerated rendition of the file in question, its restoration having been successfully accomplished through the utilization of the incidentally unearthed temporary backup copy, colloquially termed a swap file.

Q12

I have read the above examples.

☐ Yes

The name of the same class name as the same name of the same name.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
This decorator is the class component of the same name.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Simplicity compared to Reference					
Reference Sentence: This decorator registers the js class as the class component of the same name.					
This decor the js class as the class component of the same name.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Registers is the class component of the same name. as the class component of the same name. as the class component of the same name. as the class component of the same name. .	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
The name of the same class name as the same name of the same name.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
This decorator is the class component of the same name.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Reference Sentence: The `chain` method takes one argument: `m.chain(f)` `f` must be a function which returns a value if `f` is not a function, the behaviour of `chain` is unspecified.

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree
The sentence retains all semantics of the reference sentence Reference Sentence: The <code>chain</code> method takes one argument: <code>m.chain(f)</code> <code>f</code> must be a function which returns a value if <code>f</code> is not a function, the behaviour of <code>chain</code> is unspecified.					
The variable method takes one argument is a function which returns a value if a mathematical is not a function.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
<code>f</code> must be a function which returns a string if <code>f</code> is not a function , the behaviour of <code>chain</code> is unspecified.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
The <code>chain</code> method takes one argument: <code>m.chain(f)</code> <code>f</code> must be a function which returns a value if <code>f</code> is not a function, the behaviour of <code>chain</code> is unspecified. (unspecified) .	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
The <code>chain</code> method takes one argument: <code>m.chain(f)</code> <code>f</code> is not a value of the same semigroupoid if <code>f</code> is not the same semigroupoid, the behaviour of <code>chain</code> is unspecified.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Grammar Correctness Reference Sentence: The <code>chain</code> method takes one argument: <code>m.chain(f)</code> <code>f</code> must be a function which returns a value if <code>f</code> is not a function, the behaviour of <code>chain</code> is unspecified.					
The variable method takes one argument is a function which returns a value if a mathematical is not a function.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
<code>f</code> must be a function which returns a string if <code>f</code> is not a function , the behaviour of <code>chain</code> is unspecified.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
The <code>chain</code> method takes one argument: <code>m.chain(f)</code> <code>f</code> must be a function which returns a value if <code>f</code> is not a function, the behaviour of <code>chain</code> is unspecified. (unspecified) .	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
The <code>chain</code> method takes one argument: <code>m.chain(f)</code> <code>f</code> is not a value of the same semigroupoid if <code>f</code> is not the same semigroupoid, the behaviour of <code>chain</code> is unspecified.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Simplicity compared to Reference Reference Sentence: The <code>chain</code> method takes one argument: <code>m.chain(f)</code> <code>f</code> must be a function which returns a value if <code>f</code> is not a function, the behaviour of <code>chain</code> is unspecified.					
The variable method takes one argument					

is a function which returns a value if a mathematical is not a function.

`f` must be a function which returns a string if `f` is not a function , the behaviour of `chain` is unspecified.

The `chain` method takes one argument:
`m.chain(f)` `f` must be a function which returns a value if `f` is not a function, the behaviour of `chain` is unspecified. (unspecified) .

The `chain` method takes one argument:
`m.chain(f)` `f` is not a value of the same semigroupoid if `f` is not the same semigroupoid, the behaviour of `chain` is unspecified.

<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Question 10

Reference Sentence: For example, the julia method `sum!` can be called in `pyjulia` using `sum_b(...)`.

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree
The sentence retains all semantics of the reference sentence Reference Sentence: For example, the julia method <code>sum!</code> can be called in <code>pyjulia</code> using <code>sum_b(...)</code> . For example, the julia method <code>sum!</code> and <code><code_small></code> can be called in <code>pyjulia</code> using <code>sum_b(...)</code> . For example, they can be called in movies. For example, the <code>sum!</code> method can be called using the <code>pyjulia</code> method. For example, the julia method <code>sum!</code> can be called in <code>pyjulia</code> using <code>sum_b(...)</code> . using <code>sum_b(...)</code>
